Nevis Weekly Update
David Kaleko
What I’m Doing

• Continuing to work on code that analyzes output data from MRT (see last week).
• Code is close to complete; in uboonedaq repository (git)
• Bugging Kazu for C++ help (that package he made is cool) until he “rm –rf”s all of his data (whoops)
• Hack day, collaboration meeting, etc.
What I’m Doing (cont.)

• Investigating the remote-control Weiner power supply GUI at PAB that Sowjanya wrote.

• Still looking into inconsistencies (front panel not matching measured backplane voltage).
Note: I’m coming back to Nevis on July 3rd... save me a van spot!
